

‘deckRailXtra® system,
a new materials handling
attachment for
scissor lifts’

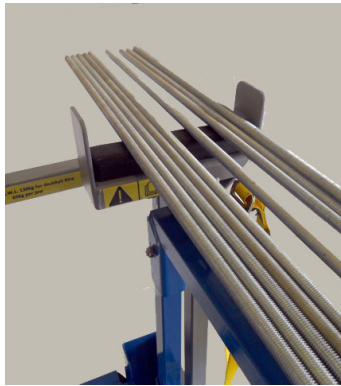

The deckRailXtra® system has been manufactured using well established engineering principles and an innovative harmonised design approach, both ergonomic and intuitive to use,

‘the whole system
perfectly complementing
both the Genie and
Skyjack Scissor lifts.’

Product Profile

Each jaw bracket has a simple, yet highly effective, lashing strap that can either gather and bundle loose materials and tubing, or restrain larger single items such as ducting/beams etc. The hard wearing shock absorbing pads reduce slip and prevent damage to any materials carried.

The unique design allows total freedom of movement for the Operator with no intrusion or restrictions into the Platform area. The platform deck extension remains fully functional and unaffected by the system.

CE marking is a mandatory safety conformity mark for products placed on the market in the European Economic Area
